

No Need to Pay for Airline Internet

If your flight allows you to receive and send text messages via the on-board Wi-Fi system then this hack is for you.

With your Android phone you can tap into this system and get on-line at no additional cost.

How it Works

This hack works with Google Messages and not any other texting app. So make sure that you are using the right app for this. Now, Google Messages just happens to play well with Gemini when it's inside Google Messages. Anything going through Gemini will look just like regular messaging to the airline's Wi-Fi System.

Making it Happen

1. Open up Google Messages
 2. Tap your profile picture in the upper right corner, then select "Messages Settings"
 3. Tap "Gemini in Messages" with the toggle "Show Gemini Button" set to ON.
 4. Go to the Messages inbox screen and in the lower right screen, find the blue starburst button located above the Start Chat Button.
 5. Tap the blue starburst button to actually start a conversation with Gemini.
- In your conversation with Gemini you can ask it to check your email or whatever you wish.
6. The blue starburst button is your key to using Gemini for your purposes.
